Experience

Test Engineer Intern June 2026 – September 2026
Grandstream Networks *Los Angeles, CA*

- Built an AI-powered issue triage workflow using n8n, Gemini, and Supabase to monitor customer reports from Reddit and company forums, classify issues by severity, and generate weekly reports and urgent alerts
- Developed an automated Python test suite to validate API compatibility across multiple VoIP device models and identify integration failures.
- Diagnosed networking and call-flow issues by analyzing TCP/IP, SIP/RTP, and packet captures using Wireshark.

Web & E-Commerce Intern June 2025 – August 2025
Fudakin Lighting *Ft. Myers, FL*

- Increased monthly online sales from fewer than 5 to 50+ by migrating the company website from WordPress to Shopify and improving SEO across site architecture and metadata

Projects

ReleaseGuard | *Python, FastAPI, PostgreSQL, Docker, GitHub Actions*

- Built a release validation tool with a FastAPI test runner and a separate mock API to test service behavior under failure conditions
- Injected slow responses, HTTP errors, service downtime, and configuration writes that silently fail so a bad release fails the suite
- Persisted each build, test run, and result in PostgreSQL, with a bug report on failures that records the endpoint, injected fault, and expected versus actual result
- Containerized both services and PostgreSQL with Docker Compose, and automated pytest execution for both services through GitHub Actions on every push

Web Search Engine | *Information Retrieval, Python, TF-IDF, Inverted Index, FastAPI*

- Built a Python search engine indexing 56,000+ web pages, implementing document parsing, URL normalization, and duplicate detection
- Developed a memory-efficient inverted index using partial indexing and k-way merging to process large datasets
- Implemented TF-IDF-style ranking with stemming and field-weighted scoring, exposing search functionality through a FastAPI endpoint

Note-Taking Web App | *React, Node.js, Express, MongoDB*

- Created a full-stack productivity tool enabling users to create, edit, and organize notes with persistent storage and real-time updates
- Developed RESTful APIs using Node.js and Express to support CRUD operations, implementing input validation and client–server communication
- Designed a responsive React frontend with dynamic state management, improving user interaction and seamless UI updates

Education

University of California, Irvine Expected Graduation December 2026
Bachelor of Science in Computer Science *Irvine, CA*

- Relevant Coursework:
  - Data Structures and Algorithms, Machine Learning and Data Mining, Linear Algebra, System Design, Information Retrieval, Computer Networks, Databases

Skills

Languages: Python, C/C++, Java, JavaScript, SQL, MIPS
Frameworks: FastAPI, Pytest, React, Node.js, Express.js, PyTorch, Tailwind CSS
Databases: PostgreSQL, MongoDB, Supabase
Tools & Platforms: Git, Docker, n8n, Wireshark, REST APIs, Firebase, Claude, Cursor
Networking: TCP/IP, HTTP, SIP, RTP, VoIP
